NCI_CGAP_DTI is a normalized cDNA library containing the following tissue(s): Metastatic Chondrosarcoma in Lung.
The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleoride used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AI871469 482 bp mRNA linear EST 07-MAR-2000 w167409.x1 NCI_CGAP_Brn25 Homo sapiens cDNA clone IMAGE:2429969 3' similar to contains element TAR1 repetitive element ;, mRNA

a modified polylinker; Site 1: Not I; Site 2: Eco RI; basand DNA from the normalized library NoT CGAP Kid3 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive purification reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1322376-1323911, 1456007-1456775, and Farima Bonald. "Butto Bonald."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /tissue type="Peripheral Nervous system"

NCI_CGAP DT0 is a cDNA library containing the following tissue (s): Metastatic Chondrosarcoma in Lung; The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oilgo-dry primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I; and cloned directionally into pT713-pac vector. The oilgonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the

NCI_CGAP_DT0 is a cDNA library containing the following viscue(s): Metatastic Chondrosarcoma in Lung. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand oDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligomacleotide used to prime the synthesis of first strand cDNA contains a library tag sequence that is located between the Not I site and the (dT) B tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BQ006379 1744 bp mRNA linear EST 26-MAR-2002 UI-H-EII-aza-i-11-0-UI.s1 NCI_CGAP_EII Homo sapiens cDNA clone IMAGS:5846098 3', mRNA sequence.

with a modified polylinker; Site 1: ECOR I; Site 2: Not I;
NCI CGAP EII is a normalized cDNĀ library containing the
following tissue(s): Chondrosarcoma. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector: The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)la tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hd52b09.g1 Canis Total Brain cDNAs Canis familiaris cDNA clone hd52b09 5', mRNA sequence.
CDNA Library preparation: Dr. M. Bento Soares, University of Iowa CDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa DNA Sequencing by: Dr. M. Bento Soares, University of Iowa Clone Distribution: Clone Distribution information medicing can be found through the I.M.A.G.E. Consortium/Libra at: http://image.llnl.gov The following repetitive elements were found in this cDNA sequence: 1-21, AT rich#Low_complexity (matched compliment) POLYA=Yes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0;
